

SYSTEM INTEGRATION OF UNITS

Chemical injection skids

Terra Technology designs and assembly Chemical Injection Packages for specialised applications in the oil & gas and chemical industries.

Our experience in the pump industry, provides us with the capability to undertake projects, from the design phase up to commissioning. With our engineering capabilities, we can provide design in 2D & 3 D as well structural analysis for the skids.

System Integration Solutions

Terra Technology FZE facility which covers an area of 5 000 SQM has the capacity to accommodate various projects of pump system integration. Our engineering team has vast experience with pump skids design and engineering and can undertake projects from the initial design stage up to commissioning.

Our team can design, fabricate and assembly, pump skid systems for various processes. With our in house modern testing bay we can test many parameters of the pumps and pump skids such as:

- ✓ Mechanical run test
- ✓ Noise test
- ✓ Pressure
- ✓ Flow
- ✓ Vibration
- ✓ Speed
- ✓ Current and voltage
